

Introduction

The **Smart Inventory Management System** is a web-based application designed to streamline inventory operations and improve resource management for organizations. The system ensures secure, role-based access for Admins and Employees to manage inventory and supplier information effectively. Built using **JSP**, **Servlets**, and **MySQL**, and deployed on the **GlassFish Server**, the project offers a robust and efficient platform tailored to business needs.

Objectives

The system aims to provide an efficient, user-friendly solution for inventory management, focusing on:

- Role-based access control for secure operations.
- Real-time tracking and management of inventory and supplier data.
- Automated low-stock alerts to optimize stock levels.
- Comprehensive reporting for informed decision-making.

Technology Stack

Technology	Details
Programming	Java
Web Framework	JSP (Java Server Pages) and Servlets
Database	MySQL
Server	GlassFish Server
Development Tools	NetBeans IDE
Frontend	HTML, CSS, JavaScript

Features and Modules

The system offers several key modules and features, tailored to specific user roles:

Role-Based Access

- **Admin:**
 - Manage employees, suppliers, and inventory.
 - Perform CRUD operations on all entities.

- Generate reports for inventory insights.
- **Employee:**
 - Update inventory details, issue items, and reorder low-stock products.

Inventory Management

- Real-time CRUD operations for inventory data, including item details, prices, and quantities.
- Low-stock alert notifications to avoid stockouts.

Supplier Management

- Maintain and manage supplier records.

Reports and Alerts

- Generate and view reports on stock status.
- Display low-stock alerts for efficient reordering.

Secure Authentication

- Role-based login to ensure secure data access.

System Design

The database design is optimized to handle inventory and user-related data efficiently.

Database Schema

- **Reports Table:** Stores information about the issued and reordered stocks.
- **Inventory Table:** Captures item details, quantities, and prices.
- **Suppliers Table:** Maintains supplier contact information.
- **Employees Table:** Contains employee details for admin management.

Workflow

1. Users log in with credentials, and role-based access redirects them to the relevant dashboard.
2. CRUD operations and other actions are processed and stored in the database.
3. Automated alerts for low stock are triggered and displayed.
4. Reports and data visualizations are rendered for users based on their permissions.

Implementation Details

Backend Development

The system uses Servlets as the controller layer to handle HTTP requests and responses. JSP files dynamically render the content based on user actions.

Frontend Design

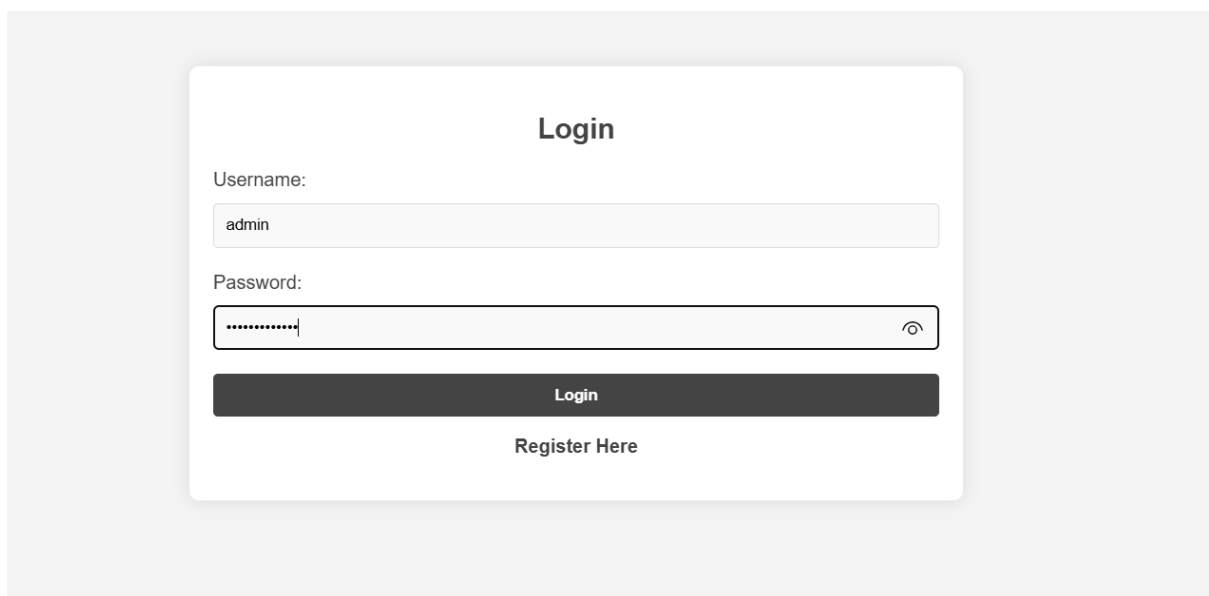

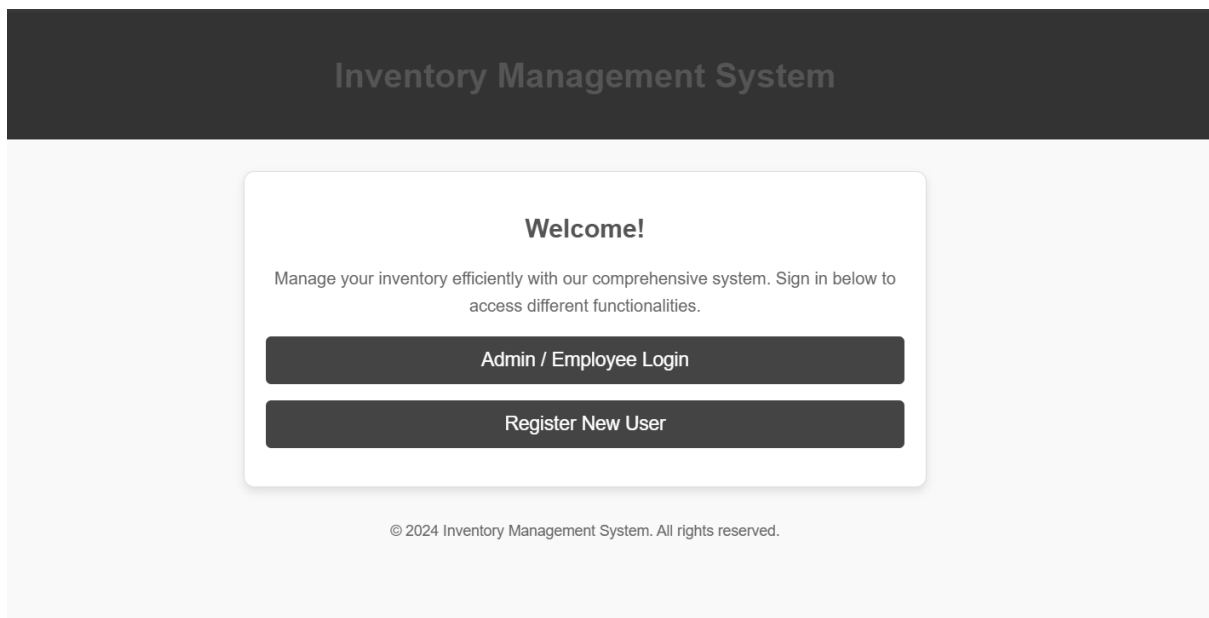

A responsive and consistent design is implemented using HTML, CSS, and JavaScript for an intuitive user experience.

Deployment

The application is deployed on the **GlassFish Server**, configured for optimal performance and secure database connections.

Challenges Faced

The project encountered several challenges during implementation, including:

- Optimizing database queries for large datasets to maintain performance.
- Implementing role-based access control for secure operations.
- Configuring the GlassFish Server for seamless deployment and execution.

Future Enhancements

To further enhance the system, the following improvements are planned:

- Add advanced analytics with graphical reports for better decision-making.
- Develop a mobile-responsive design to improve accessibility.
- Integrate external APIs for additional functionalities like payment systems or third-party ERP tools.

Conclusion

The **Smart Inventory Management System** successfully addresses the challenges of inventory management with its robust design and efficient functionalities. Leveraging the **GlassFish Server** and modern web technologies, the system provides a secure and scalable platform that meets organizational needs. It demonstrates the effective application of software development principles to solve practical business problems.
